Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 3-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Robins et al (4912781).

Robins teaches a cord comprising a polyarylate fiber strand core (Claim 8, Vectran) and a plurality of outer twisted strands of glass (Claim 20).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2 and 8-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Robins et al (4912781).

Robins essentially teaches the invention as detailed above, but fails to specifically teach its use in rubber. It would have been obvious, however, to one of ordinary skill in the art at the time the invention was made, to have utilized the cord of Robins either as a cord or as a fabric, in rubber, so as to gain the benefit of composite materials in use together. If used in a glove, the addition of rubber would provide a degree of friction and tackiness making objects easier to

grasp. If used in a rubber belt, a degree of cut resistance would be provided to a device which appreciates the benefit of abrasion resistance. All of which would be within the abilities of the ordinarily skilled artisan. In regards to the volume percentage of polyarylate fiber being between 20 and 80 percent, the ordinarily skilled artisan would have been capable of determining the proper percentage to use. Applicant's range is more than half of the possible combinations, and the ordinarily skilled artisan would have been more than capable of determining this amount without undue experimentation. Even a presumption of 50/50, which would have been expected, would have satisfied Applicant's range requirements.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hummel (6826898), Hummel (6279305), Hoyt et al (6431497), and Akiyama et al (20050091960) all teach what is well known in the art.
